Profile

I'm a backend and platform engineer with 15+ years of experience, most recently as a tech lead and platform engineer in fintech, payments and telecom. I build TypeScript/NestJS systems on AWS and make them easy to run: observability, CI/CD, security gates, and a developer experience that lets teams ship fast without breaking production. I also build AI integrations on top of existing systems, such as LLM agents that use real APIs as tools and MCP servers, and I work with AI coding agents every day in a review-first way.

Skills

Backend: TypeScript · Node.js · NestJS · GraphQL / Apollo · PostgreSQL / MySQL · C++ · Java · PHP

AI integrations: LLM agents · MCP · RAG · LangChain · A2A · OpenAI API · Tool calling over existing APIs

Platform / cloud: AWS · CDK · Lambda · ECS / Fargate · Kubernetes · Docker · GitHub Actions · CI/CD

Observability: Elastic APM / RUM · Kibana · Structured logging · Dashboards · Personal-data redaction

Frontend: React / Next.js · Angular · Vue.js · Electron · Cordova

Leadership: Technical direction · Hiring & onboarding · Coaching · Code reviews · Sprint management

Consultancy & own projects

NestDev

Dec 2024 – today

Software Engineer · Contractor

- Freelance software engineering and technical leadership across multiple clients.
- Focused on modular design, scalability, performance, and reliability.

Odido

Apr 2026 – Oct 2026

DevEx & Platform Engineer, contract via NestDev

- Introduced standard structured (ECS) logging across the NestJS back ends, with request context and aligned log/APM service identity, making requests traceable end to end in Elastic.
- Built Kibana error-investigation and service-health dashboards for all environments, managed as code with drift detection.
- Implemented personal-data redaction in logs (emails, phone numbers, personal fields, URL-encoded values) and stopped outbound API clients from logging payloads, headers and credentials.
- Hardened CI and the supply chain: Dependabot plus a dependency-review gate that blocks high and critical vulnerabilities, and a CI check that catches NestJS dependency-injection failures before deploy.
- Delivered account, authentication and consent features end to end, plus Web Vitals monitoring (Elastic RUM) and automated sitemap generation.
- Reviewed code and backend architecture, and used AI coding agents in a governed, review-first workflow. 30+ merged pull requests in five months.

Game7

Dec 2024 – Mar 2025

Tech Lead · NestDev

- Tech Lead on a community-driven gaming platform, guiding backend architecture and developer experience.
- Worked on the infrastructure behind a large-scale MMORPG: backend services and tooling.

AI Internal tooling & AI integrations

Own projects · NestDev

- Tirrenia, my own platform in production: TypeScript monorepo with NestJS, Angular and Next.js on PostgreSQL; about 30 modules, integrated with Odoo, Just Eat Takeaway, bunq and Viva Wallet.
- An AI agent that plans with an LLM and calls the platform's own API as tools, with a dry-run mode; the same APIs are exposed as MCP servers.
- Open-source tooling to distribute and coordinate AI coding agents: agentwheel and agent-mesh.

Earlier career

Embed (ex. Fung Payments)
Aug 2022 – Jan 2025

Senior Software Engineer, then Platform Engineer

- Designed and implemented scalable, high-performance solutions leveraging AWS Lambda, Fargate, and event-driven architectures.
- Maintained and enhanced observability systems to proactively detect bottlenecks and reduce incident response time.
- Improved and maintained NestJS framework, providing technical support and guidance to product engineering teams.

Bitvavo
Nov 2020 – Oct 2022

Technical Lead

- Led a JS to TypeScript migration across a large multi-service architecture (NestJS, GraphQL Federation, Next.js).
- Designed Internal Tools and User-domain architecture using DDD, OOP, and reactive-functional patterns.
- Owned team leadership: hiring, onboarding, coaching, code reviews, and technical documentation.

Harlem Next
Nov 2019 – Oct 2020

Senior Software Developer

- Managed backend development for the platform's payment system, enabling secure and reliable transactions.

RS Red Square Team
Sep 2018 – Nov 2019

Founder & Lead Developer

- Built web, desktop and mobile apps with React, GraphQL/Apollo, Node.js, TypeScript, Electron and Cordova, and ran the projects with Agile practices.

H Hyperweb
2006 – 2019

Founder & Lead Developer

- Hyperweb has been delivering software development, consulting, and technical assistance since 2007, with a strong focus on quality and continuous improvement. I have developed numerous websites and mobile applications using PHP, Node.js, and React.js for both national and international clients.

+ Earlier roles
2009 – 2016

Lenus Media · Graffelab · 7Web

- Lead and full-stack developer: cross-platform web and mobile apps (PHP, Cordova, REST), front-end work, and CRM and e-commerce software (Java, PHP).

Open source & selected projects

AzerothCore
2016 – today

Founder and lead developer

- Founder and lead developer of AzerothCore, an open-source, modular MMO server framework in C++, started in 2016 and still active.
- 8,900+ stars, 3,800+ forks and 600+ contributors; used in production by public game servers.

NestDev [Lab]: agentwheel · syncwheel · nestjs-yalc · portable-agent-memory · agent-core-toolkit · agent-mesh.
Noderouter: programmable proxy with integrated discovery-service, tunneling and DNS.

Education

Bachelor's degree in Information Technology · 2012 – 2019
University of Salerno, Department of Information Technology · EQF level 6

I.T. High School · 2007 – 2009
I.T.I.S Focaccia · EQF level 5

Scientific high school · 2004 – 2006
A. Genoino
